

### Comparison of largemouth and smallmouth bass Proportional Stock Density (PSD) vs. *Lepomis* PSD from electrofishing data in 2000-2009

Potential interpretations for the different combinations are : A = mutual balance for satisfactory fishing; B = community comprised of large, old specimens, indicative of an unfished population; C = large predators excessively cropping large prey; D = overfishing of predators and stunting of prey; and E = high population of small predators excessively cropping young prey.
