

**Electrofishing Shannon Diversity Index in 2009 from each stratum and the entire lake for each sampling event.**

*Clupeids (shad and alewives) are often captured in high numbers that can dramatically alter the diversity results. This table presents the diversity of the fish community both with and without the clupeids.*

<b>Season</b>	<b>Stratum</b>	<b>With Clupeids</b>	<b>Without Clupeids</b>
Whole Year	Whole Lake	0.997	0.911
	Stratum 1	0.946	0.879
	Stratum 2	1.013	0.932
	Stratum 3	0.972	0.913
	Stratum 4	0.892	0.827
	Stratum 5	0.867	0.865
Spring	Whole Lake	0.968	0.908
	Stratum 1	0.933	0.872
	Stratum 2	0.959	0.902
	Stratum 3	0.873	0.910
	Stratum 4	0.918	0.863
	Stratum 5	0.811	0.811
Fall	Whole Lake	0.941	0.886
	Stratum 1	0.879	0.838
	Stratum 2	0.950	0.954
	Stratum 3	0.936	0.883
	Stratum 4	0.772	0.761
	Stratum 5	0.884	0.879
